ABSTRACT

JIGSAW cooperative learning model is one of the most important components that can diterapkan during the learning process in the classroom. Application of jigsaw cooperative learning model can solve the various problems that occur during the learning process takes place. One of them is the problem of learning mathematics, in particular subject area and perimeter of a flat wake. These subjects tend to be considered difficult by the students, because students find it difficult to understand the material count, but there are also students in counting. It can interfere with the learning process and student learning outcomes be decreased. To overcome these problems, a teacher must be able to choose a learning model that will be used during the learning process. Application of jigsaw cooperative learning model is expected to facilitate the students to understand the material computation in mathematics and during the learning process of students participate actively. So that the learning process runs effectively and fun.
